

Machine Learning Model Comparison

by Nadhif Rif'at Rasendriya

Overview

In this project, I compare several commonly used **machine learning models**, namely K-Nearest Neighbors (KNN), Kernel SVM, Logistic Regression, Naive Bayes, SVM, Decision Tree, and Random Forest.

I evaluate and compare the performance and accuracy of these models using a breast cancer dataset, from which the **confusion matrix** and **accuracy score** are obtained.

Based on these results, I analyze which model demonstrates the best predictive performance.

Models Used

K-Nearest Neighbors
(K-NN)

Support Vector
Machine (SVM)

Logistic Regression

Naive Bayes

Kernel SVM

2nd

Random Forest

Decision Tree

The Result

**Decision
Tree**

Best Model

**Kernel
SVM**

2nd Best Model

Conclusion

Based on the results obtained, the **Decision Tree** model demonstrated the best performance with an accuracy score of **95.90%** on the breast cancer dataset.

On the other hand, the **Random Forest** model showed the lowest performance, with an accuracy score of **93.56%**. An alternative option is the **Kernel SVM**, which achieved a comparable accuracy score of **95.32%**, making it a close contender to the Decision Tree.
